Overview of the ServiceNow Tokyo Delta Exam

The ServiceNow Tokyo Delta exam is designed for professionals who have previously attained certification on an earlier release of the ServiceNow platform and want to demonstrate their knowledge of the latest Tokyo release updates. This exam focuses on the new functionalities, improvements, and best practices introduced in the Tokyo version. It serves as a bridge certification to keep certified individuals current without requiring a full new certification exam.

Purpose and Eligibility

The primary purpose of the Tokyo Delta exam is to validate a candidate's understanding of the new features and enhancements in the Tokyo release. Eligibility usually requires holding a valid certification on a previous ServiceNow release, such as the New York or Orlando versions. This ensures that candidates have foundational platform knowledge before updating their certification status.

Exam Format and Structure

The exam typically consists of multiple-choice questions that test knowledge across different ServiceNow modules and platform enhancements introduced in Tokyo. The exam duration is generally one hour, with around 40 to 50 questions. Passing scores vary but usually hover around 70%. The format emphasizes scenario-based questions, practical application, and understanding of new capabilities.

Key Topics Covered in the Exam

The ServiceNow Tokyo Delta exam questions and answers focus on several critical areas to ensure comprehensive coverage of the platform's updates. These topics reflect the significant changes and new features introduced in the Tokyo release, which affect various components of the ServiceNow ecosystem.

Platform Features and Enhancements

This section covers the core platform improvements, including new development tools, UI/UX enhancements, and performance optimizations. Candidates must understand how these updates impact day-to-day platform use and administration.

IT Service Management (ITSM) Updates

The exam includes questions on changes to ITSM workflows, incident management, problem management, and change management processes. New automation features and integration capabilities are also emphasized.

IT Operations Management (ITOM) and Security Operations

Updates in ITOM, such as improved event management and discovery, as well as enhanced security incident response capabilities, form an important part of the exam content.

Application Development and Integration

Candidates must be familiar with new application development frameworks, integration tools, and API enhancements introduced in Tokyo. Service Portal updates and Flow Designer improvements are also tested.
