Overview of Sonday Reading Program Training

The Sonday reading program training is designed to prepare educators to deliver a systematic, explicit phonics-based reading curriculum. Developed by Arlene Sonday, this program focuses on foundational literacy skills critical for early readers and those who require targeted intervention. The training typically involves a blend of theoretical instruction and practical application, allowing teachers to gain proficiency in using Sonday's multisensory approach. This approach integrates auditory, visual, and kinesthetic learning modalities to reinforce reading concepts effectively.

Training sessions often cover the history and research behind the program, familiarizing educators with the rationale for structured literacy instruction. Participants also learn to assess student reading abilities and tailor instruction to meet individual needs. The Sonday program is widely used in elementary schools, intervention settings, and special education environments, making training a valuable asset for a broad range of

educators.

Key Components of the Training

The core of the Sonday reading program training lies in its comprehensive coverage of phonological and phonemic awareness, decoding, encoding, fluency, and comprehension strategies. These components are essential for developing proficient reading skills and are delivered through a sequenced curriculum that builds on each previous skill.

Phonemic Awareness and Phonics Instruction

Phonemic awareness is the ability to identify and manipulate individual sounds in spoken words, a foundational skill taught extensively during the training. Educators learn techniques to help students segment, blend, and substitute sounds, which are crucial for decoding words. Phonics instruction in the Sonday program emphasizes explicit teaching of sound-symbol relationships, enabling students to decode unfamiliar words confidently.

Multisensory Teaching Techniques

A distinctive feature of the Sonday training is the emphasis on multisensory instruction. Teachers are trained to engage students through visual, auditory, and tactile modalities simultaneously. This approach supports diverse learning styles and has been shown to improve retention and application of reading skills, particularly for learners with dyslexia or other reading difficulties.

Structured Lesson Plans and Materials

The program provides detailed, scripted lesson plans and materials that guide educators through each instructional session. Training ensures that teachers are comfortable and effective in delivering these lessons, which include activities such as letter formation, word building, and sentence construction. Mastery of these materials is a key outcome of the training process.
