Essential Statistical Formulas

Students should be proficient in the following formulas:

1. Mean: $\bar{x} = \frac{\sum x_i}{n}$
2. Variance: $s^2 = \frac{\sum (x_i - \bar{x})^2}{n-1}$
3. Standard Deviation: $s = \sqrt{s^2}$
4. Probability of an Event: $P(A) = \frac{\text{Number of favorable outcomes}}{\text{Total outcomes}}$
5. Binomial Probability: $P(X = k) = \binom{n}{k} p^k (1-p)^{n-k}$

Use of Statistical Tables

Statistical tables such as the z-table and t-table assist in determining critical values needed for confidence intervals and hypothesis testing. Familiarity with reading these tables is essential for exam efficiency.
