Understanding these primary sections helps users identify specific parts quickly and assess the condition of the saw during maintenance or repair procedures.

Engine and Carburetor Assembly

The engine is the powerhouse of the TS350, with the carburetor ensuring proper fuel and air mixture for efficient operation. The parts diagram displays all related components, including the piston, cylinder, gaskets, and carburetor jets. These parts must be maintained carefully to prevent performance issues and engine damage.

Cutting Wheel and Guard

The cutting wheel is the primary tool attached to the TS350, designed for precise material cutting. The guard protects the operator from debris and wheel fragments. The diagram illustrates the mounting hardware and safety features involved in this section.

Interpreting the Stihl TS350 Parts Diagram

Interpreting the Stihl TS350 parts diagram requires understanding the symbols, labels, and exploded views used to represent the assembly. Each part is usually numbered and corresponds to a parts list that provides names, part numbers, and specifications.

To effectively use the diagram:

1. Identify the section of the saw relevant to your task (e.g., engine, fuel system).
2. Locate the part numbers alongside the exploded view.
3. Cross-reference the part number with the parts list to obtain detailed information.

4. Use the layout to understand how parts fit together and the correct order for assembly or disassembly.

Familiarity with the diagram reduces errors during repairs and ensures that replacement parts are installed correctly.

Common Replacement Parts and Their Functions

The most frequently replaced parts on the Stihl TS350, as indicated by the parts diagram, include filters, spark plugs, cutting wheels, recoil starters, and carburetor components. Each has a specific function vital to the saw's operation.

- **Air Filter:** Prevents dust and debris from entering the engine, crucial for longevity and performance.
- **Spark Plug:** Ignites the fuel-air mixture in the engine cylinder to start and run the saw.
- **Cutting Wheel:** The consumable part that performs the cutting; needs regular replacement based on wear.
- **Recoil Starter:** Enables manual starting of the engine; common wear part in frequently used saws.
- **Carburetor Parts:** Jets and diaphragms that control fuel flow and mixture; essential for smooth engine operation.

Using the parts diagram to identify these components ensures that replacements are compatible and of the correct specification.
