DEFINITION AND CHARACTERISTICS OF SYSTEM OF SYSTEMS ENGINEERING

SYSTEM OF SYSTEMS ENGINEERING (SoSE) IS A SPECIALIZED BRANCH OF SYSTEMS ENGINEERING THAT FOCUSES ON THE INTEGRATION AND COORDINATION OF MULTIPLE INDEPENDENT SYSTEMS TO ACHIEVE A COLLECTIVE MISSION OR FUNCTIONALITY. UNLIKE TRADITIONAL SYSTEMS ENGINEERING, WHICH CONCENTRATES ON A SINGLE, UNIFIED SYSTEM, SoSE DEALS WITH SYSTEMS THAT RETAIN THEIR OWN MANAGEMENT, GOALS, AND OPERATIONS WHILE CONTRIBUTING TO A BROADER, MORE COMPLEX SYSTEM NETWORK.

KEY CHARACTERISTICS

THE DEFINING CHARACTERISTICS OF A SYSTEM OF SYSTEMS INCLUDE OPERATIONAL INDEPENDENCE, MANAGERIAL INDEPENDENCE, GEOGRAPHIC DISTRIBUTION, EVOLUTIONARY DEVELOPMENT, AND EMERGENT BEHAVIOR. OPERATIONAL INDEPENDENCE MEANS EACH CONSTITUENT SYSTEM CAN OPERATE INDEPENDENTLY AND FULFILL ITS OWN OBJECTIVES. MANAGERIAL INDEPENDENCE INDICATES THAT THESE SYSTEMS ARE MANAGED SEPARATELY, OFTEN BY DIFFERENT ORGANIZATIONS OR STAKEHOLDERS. GEOGRAPHIC DISTRIBUTION REFERS TO THE PHYSICAL SEPARATION OF SYSTEMS, WHICH MAY INTERACT OVER NETWORKS OR OTHER COMMUNICATION INFRASTRUCTURES. EVOLUTIONARY DEVELOPMENT HIGHLIGHTS THE CONTINUAL GROWTH AND MODIFICATION OF SYSTEMS OVER TIME. EMERGENT BEHAVIOR ARISES WHEN THE INTEGRATED SYSTEM OF SYSTEMS EXHIBITS NEW CAPABILITIES OR BEHAVIORS THAT ARE NOT PRESENT IN THE INDIVIDUAL COMPONENT SYSTEMS.

DISTINCTION FROM TRADITIONAL SYSTEMS ENGINEERING

TRADITIONAL SYSTEMS ENGINEERING TYPICALLY EMPHASIZES A TOP-DOWN APPROACH FOR DESIGNING AND CONTROLLING A SINGLE SYSTEM WITH WELL-DEFINED REQUIREMENTS AND INTERFACES. IN CONTRAST, SYSTEM OF SYSTEMS ENGINEERING DEALS WITH THE COMPLEXITIES OF INTEGRATING HETEROGENEOUS SYSTEMS THAT ARE INDEPENDENTLY DEVELOPED, EVOLVING ASYNCHRONOUSLY, AND GOVERNED BY DIFFERENT MANAGEMENT STRUCTURES. THIS DISTINCTION REQUIRES UNIQUE APPROACHES IN ARCHITECTURE, INTEGRATION, AND LIFECYCLE MANAGEMENT.

CORE PRINCIPLES AND METHODOLOGIES

SYSTEM OF SYSTEMS ENGINEERING APPLIES A SET OF FOUNDATIONAL PRINCIPLES AND METHODOLOGIES THAT GUIDE THE FORMULATION, ANALYSIS, AND REALIZATION OF COMPLEX SYSTEM NETWORKS. THESE PRINCIPLES ENSURE THE SUCCESSFUL ORCHESTRATION OF DIVERSE SYSTEMS TO DELIVER ENHANCED CAPABILITIES AND SERVICES.

ARCHITECTURAL FRAMEWORKS

AN ESSENTIAL ASPECT OF SoSE IS THE DEVELOPMENT OF ARCHITECTURAL FRAMEWORKS THAT DESCRIBE THE STRUCTURE, RELATIONSHIPS, AND INTERACTIONS AMONG CONSTITUENT SYSTEMS. THESE FRAMEWORKS FACILITATE UNDERSTANDING AND MANAGEMENT OF COMPLEXITY BY PROVIDING STANDARDIZED MODELS AND VIEWPOINTS THAT SUPPORT COMMUNICATION, DESIGN, AND DECISION-MAKING PROCESSES.

SYSTEMS INTEGRATION TECHNIQUES

INTEGRATION IN SoSE INVOLVES COMBINING MULTIPLE AUTONOMOUS SYSTEMS INTO A COHESIVE WHOLE. TECHNIQUES INCLUDE INTERFACE STANDARDIZATION, MIDDLEWARE SOLUTIONS, AND SERVICE-ORIENTED ARCHITECTURES THAT ENABLE INTEROPERABILITY AND DATA EXCHANGE. INTEGRATION EFFORTS MUST ACCOMMODATE VARYING TECHNOLOGIES, PROTOCOLS, AND OPERATIONAL TEMPOS OF CONSTITUENT SYSTEMS.

REQUIREMENTS ENGINEERING AND MANAGEMENT

MANAGING REQUIREMENTS IN SYSTEM OF SYSTEMS ENGINEERING IS CHALLENGING DUE TO CONFLICTING OBJECTIVES AND EVOLVING STAKEHOLDER NEEDS. METHODOLOGIES EMPHASIZE ITERATIVE ELICITATION, PRIORITIZATION, AND TRACEABILITY OF REQUIREMENTS ACROSS DIFFERENT SYSTEMS TO ENSURE ALIGNMENT WITH THE OVERARCHING GOALS OF THE SYSTEM OF SYSTEMS.

VERIFICATION, VALIDATION, AND TESTING

ENSURING THE CORRECTNESS AND PERFORMANCE OF A SYSTEM OF SYSTEMS REQUIRES COMPREHENSIVE VERIFICATION AND VALIDATION STRATEGIES. TESTING MUST ADDRESS BOTH INDIVIDUAL SYSTEMS AND THEIR INTEGRATED BEHAVIOR, FOCUSING ON EMERGENT PROPERTIES AND OPERATIONAL SCENARIOS THAT SPAN MULTIPLE SYSTEMS.

LIFECYCLE MANAGEMENT

SYSTEM OF SYSTEMS ENGINEERING ADOPTS LIFECYCLE MODELS THAT ACCOMMODATE THE CONTINUOUS EVOLUTION, UPGRADE, AND REPLACEMENT OF CONSTITUENT SYSTEMS. LIFECYCLE MANAGEMENT PRACTICES INCORPORATE STRATEGIES FOR SUSTAINMENT, ADAPTABILITY, AND DECOMMISSIONING TO MAXIMIZE SYSTEM EFFECTIVENESS OVER TIME.
