Understanding the Hogan Assessment

The Hogan Assessment is a suite of psychological assessments that measure various aspects of personality, including:

- Hogan Personality Inventory (HPI): This assessment evaluates normal personality traits and how they influence behavior in a work environment. It helps identify strengths and potential challenges in interpersonal relationships, work habits, and overall work performance.
- Hogan Development Survey (HDS): This tool assesses potential derailers—personality traits that can negatively impact an individual's performance in stressful situations or during times of transition.
- Motives, Values, Preferences Inventory (MVPI): The MVPI measures an individual's core values, motivations, and preferences, helping to determine whether they will be satisfied and engaged in their work roles.

Together, these assessments provide a comprehensive overview of an individual's personality and behavior, making them a valuable resource for organizations seeking to optimize their talent management strategies.
