- Access: It included areas for actors to prepare and change costumes, as well as storage for props and set pieces.
- Functionality: The backstage area allowed for quick scene changes and provided a space for actors to rest between performances.

The Tiring House

The tiring house was situated at the rear of the stage and served multiple purposes.

- Purpose: It was used as a dressing room for actors and a storage area for costumes and props.
- Design: The tiring house had multiple levels, which allowed for different entrances and exits, adding complexity to the performances.

The Entrance and Exit

The Globe Theater featured several entrances and exits for both actors and audience members.
