Diatonic Triads and Their Construction

Diatonic triads form the backbone of tonal harmony and are central to the exercises found in tonal

harmony workbook answers chapter 2. These triads are constructed by stacking thirds on each scale degree within a given key, resulting in seven distinct chords that naturally occur within the major or minor scale. Comprehending the formation of these triads is crucial for analyzing harmonic function and for identifying chord qualities such as major, minor, diminished, and augmented.

Building Triads on Scale Degrees

To construct diatonic triads, begin by selecting a key and identifying its scale degrees. For example, in a C major scale, the seven scale degrees are C, D, E, F, G, A, and B. By stacking a third and a fifth above each degree, triads are formed as follows:

- **I (Tonic):** C - E - G (major)
- **ii (Supertonic):** D - F - A (minor)
- **iii (Mediant):** E - G - B (minor)
- **IV (Subdominant):** F - A - C (major)
- **V (Dominant):** G - B - D (major)
- **vi (Submediant):** A - C - E (minor)
- **vii° (Leading Tone):** B - D - F (diminished)

Each triad's quality is determined by the intervals between the root, third, and fifth. Chapter 2 exercises emphasize recognizing these qualities and practicing their construction in various keys.

Voice Leading Principles in Tonal Harmony

Voice leading is the practice of smoothly connecting chords through individual melodic lines or voices. The tonal harmony workbook answers chapter 2 highlight essential voice leading rules that ensure harmonic coherence and stylistic appropriateness in four-part writing. Mastery of these principles is vital for creating logical and pleasing harmonic progressions.

Rules of Voice Leading

Effective voice leading adheres to several key guidelines, which include:

- **Maintain common tones:** Retain common tones between chords in the same voice whenever possible to create smooth transitions.
- **Stepwise motion:** Move voices by step or small intervals rather than large leaps to preserve melodic continuity.
- **Avoid parallel fifths and octaves:** Parallel motion in perfect fifths or octaves between two voices is generally prohibited as it weakens independence.
- **Resolve tendency tones:** Leading tones (scale degree 7) resolve upward to the tonic, and chord sevenths resolve downward by step.
- **Proper spacing and doubling:** Maintain appropriate voice ranges and avoid doubling tendency tones while doubling stable chord tones.

Exercises in chapter 2 require applying these rules in harmonizing melodies and moving between chords logically.

Chord Quality Identification and Analysis

Identifying chord qualities is a fundamental skill emphasized in tonal harmony workbook answers chapter 2. This includes recognizing major, minor, diminished, and augmented triads, as well as understanding their function within a key. Accurate analysis aids in predicting chord progressions and supports proper voice leading.

Common Chord Qualities in Chapter 2

The following chord qualities are frequently addressed in the workbook:

- **Major triads:** Root, major third, perfect fifth
- **Minor triads:** Root, minor third, perfect fifth
- **Diminished triads:** Root, minor third, diminished fifth
- **Augmented triads:** Root, major third, augmented fifth (less common in early chapters)

The workbook exercises challenge students to identify chords by ear, notation, or harmonic context and to label them with correct Roman numerals and figured bass symbols.

Common Harmonic Progressions in Chapter 2

Chapter 2 of the tonal harmony workbook introduces students to typical harmonic progressions using diatonic triads. Understanding these progressions is vital for grasping tonal relationships and developing musical phrasing skills.

Typical Progressions and Their Functions

The most common progressions focus on tonic, predominant, and dominant functions, such as:

1. **I – IV – V – I**: The basic harmonic progression establishing tonality.
2. **ii – V – I**: A predominant to dominant to tonic progression, often used in cadences.
3. **vi – IV – V – I**: A progression that incorporates the submediant for variety.

Exercises involve harmonizing melodies using these progressions while respecting voice leading rules and chord qualities. The workbook answers provide detailed analysis of each step in these progressions.

Practical Exercises and Answer Explanations

The tonal harmony workbook answers chapter 2 include a variety of practical exercises designed to reinforce theoretical concepts through application. These exercises typically consist of harmonizing given melodies, constructing triads, and analyzing chord progressions.

Example Exercise Breakdown

One common exercise involves the harmonization of a simple melody in four parts. The workbook answers guide users through:

- Identifying the key and scale degrees of each melody note
- Selecting appropriate diatonic triads for each harmony point
- Applying voice leading rules to connect chords smoothly

- Labeling chords with Roman numerals and figured bass
- Checking for common errors such as parallel fifths or improper doubling

These detailed explanations help solidify understanding and provide a reliable reference for students working through chapter 2 content.
