The answer key provides step-by-step solutions demonstrating how to apply these rules in various scenarios.

Types of Events

Events are classified to better understand their interactions and impact on probability calculations. Key types include:

- **Independent Events:** Events where the outcome of one does not affect the other.
- **Dependent Events:** Events where the outcome of one affects the probability of the other.
- **Mutually Exclusive Events:** Events that cannot happen simultaneously.

- **Compound Events:** Events involving the combination of two or more simple events.

Statistical Techniques and Applications

Statistics involves collecting, analyzing, interpreting, and presenting data. Unit 11 emphasizes descriptive statistics and introduces inferential concepts through practical applications. The answer key supports learners by providing detailed calculations and explanations for various statistical measures and graphical analyses.

Measures of Central Tendency and Dispersion

These measures summarize data sets to provide insights into their distribution and spread. The key statistical measures covered include:

- **Mean:** The average value of a data set.
- **Median:** The middle value when data is ordered.
- **Mode:** The most frequently occurring value.
- **Range:** The difference between the maximum and minimum values.
- **Variance and Standard Deviation:** Measures of data spread around the mean.
