# Wiring Connections

Proper wiring connections are crucial for the Wavelynx reader to function correctly. Below are the typical connections you will find in the wiring diagram.

## 1. Power Connection

- Connect the positive (+) terminal of the power supply to the power input terminal on the reader.
- Connect the negative (-) terminal of the power supply to the ground (GND) terminal on the reader.

## 2. Data Communication Connections

Depending on the chosen communication method, make the following connections:

- For RS-232 Communication:

- Connect the TX (transmit) pin of the reader to the RX (receive) pin of the host device.
  - Connect the RX pin of the reader to the TX pin of the host device.
  - Connect the GND of both devices to ensure a common ground.
- 
- For USB Communication:
  - Plug the USB cable into the USB port of the reader and connect the other end to the computer.
- 
- For Ethernet Communication:
  - Connect an Ethernet cable from the reader's Ethernet port to the network switch or router.

### **3. Antenna Connection**

- If using an external antenna, connect it to the antenna port on the reader, ensuring it is securely fastened.

### **4. Indication LEDs Wiring**
