Detailed Breakdown of Q1 7 Answer Key

To illustrate the utility of the answer key, let's provide a hypothetical breakdown of the answers for the Q1 7 weekly math review. Below are some sample questions and their corresponding answers, explanations, and problem-solving strategies.

Sample Problems and Answers

1. Problem 1: Solve the equation $(3x + 4 = 16)$.

- Answer: $(x = 4)$

- Explanation: Subtract 4 from both sides to get $(3x = 12)$, then divide by 3 to isolate (x) .

2. Problem 2: Calculate the area of a rectangle with a length of 5 cm and a width of 3 cm.

- Answer: Area = $(\text{length} \times \text{width} = 5 \times 3 = 15 \text{ cm}^2)$

- Explanation: The area formula for rectangles is straightforward; multiply the length by the width.

3. Problem 3: What is the value of $(7 + 2 \times (5 - 3))$?

- Answer: (9)

- Explanation: Using the order of operations, first solve the parentheses $(5 - 3 = 2)$, then multiply $(2 \times 2 = 4)$, and finally add $(7 + 4 = 9)$.

4. Problem 4: A triangle has a base of 6 cm and a height of 4 cm. What is its area?

- Answer: $\text{Area} = \frac{1}{2} \times \text{base} \times \text{height} = \frac{1}{2} \times 6 \times 4 = 12 \text{ cm}^2$

- Explanation: The area of a triangle is calculated using the formula $\frac{1}{2} \times \text{base} \times \text{height}$.

5. Problem 5: If a student scored 80% on a test of 50 questions, how many questions did they answer correctly?

- Answer: 40 questions

- Explanation: To find the number of correct answers, calculate $(0.8 \times 50 = 40)$.
