Wilson Orton Gillingham training is an influential approach designed to help educators effectively teach students with dyslexia and other language-based learning difficulties. This structured, multisensory method emphasizes the importance of direct instruction in reading and spelling and is rooted in the principles of the Orton-Gillingham approach, developed in the early 20th century. Understanding the foundations, methodologies, and benefits of Wilson Orton Gillingham training can significantly enhance the teaching capabilities of educators and the learning experiences of students with dyslexia.

Understanding the Orton-Gillingham Approach

The Orton-Gillingham approach is a time-tested educational strategy that combines various teaching techniques to address the unique needs of learners with dyslexia. It was created by Dr. Samuel Orton and Anna Gillingham and emphasizes the following key components:

- **Multisensory Learning:** The approach uses visual, auditory, and kinesthetic activities to reinforce learning.
- **Structured Language:** Instruction is systematic and follows a logical progression, making it easier for students to grasp complex language concepts.
- **Individualized Instruction:** Lessons are tailored to each student's specific needs, allowing for personalized learning experiences.
- **Direct Instruction:** This method promotes explicit teaching of language rules and patterns, ensuring that students understand the "why" behind the concepts.

These principles are embodied in Wilson Language Training's programs, which have been developed to provide effective instruction for struggling readers.
