Performing regular maintenance not only enhances performance but also extends the life of your Yamaha Big Bear 400 4x4. Some common tasks include:

1. Oil and Filter Change

Changing the oil and filter is essential for keeping the engine running smoothly. Here's how to do it:

1. Gather the required tools: oil filter wrench, socket set, and a drain pan.
2. Warm up the engine slightly to thin the oil, making it easier to drain.
3. Remove the drain plug and allow the old oil to drain completely.
4. Replace the oil filter using the oil filter wrench.
5. Reinstall the drain plug and refill with fresh oil (check the manual for specifications).
6. Run the engine for a few minutes, then recheck the oil level.

2. Air Filter Maintenance

A clean air filter ensures optimal engine performance. Follow these steps:

1. Locate the air filter and remove the cover.
2. Take out the air filter and inspect it for dirt and damage.
3. If it's dirty, clean it with compressed air or replace it if necessary.
4. Reinstall the air filter and secure the cover.

3. Brake Inspection

Regular brake checks are vital for safety:

1. Inspect the brake pads for wear and tear.

2. Check the brake fluid level and top it off if necessary.
3. Test the brakes while riding at low speed to ensure they are functioning properly.

4. Tire Maintenance

Proper tire maintenance enhances the performance and safety of your ATV:

1. Check tire pressure regularly and inflate to the recommended PSI.
2. Inspect tires for signs of wear or damage, such as cracks or bulges.
3. Rotate tires periodically to ensure even wear.
